Florida Ban On Texting And Driving

By Renee Goodwin
Contributing Writer

Gov. Rick Scot signing into law Florida's ban on texting and driving.

Photo from Rick Scott's twitter

It's official, Florida is the 41st state to pass legislation concerning the use of cellular devices in a motor vehicle. As Gov. Rick Scott signed the bill into law, he spoke to the crowd gathered at Alonzo and Tracy Mourning Senior High School in Miami.

"As a father and a grandfather, texting while driving is something that concerns me when my loved ones are on the road. We must do everything we can at the state level to keep our teenagers and everyone on our roads safe. I cannot think of a better time to officially sign this bill into law," said Gov. Scott.

As everyone knows, texting and driving is a dangerous pass time. In 2011, at least 23 percent of auto collisions involved cell phones, causing over 1.6 million accidents, according to the National Safety Council. Gov. Rick Scott's words on texting and driving couldn't ring more true.

While signed at the end of May, the bill does not take effect until Oct. 1, 2013. On that date, Florida Statute 316.305 will state "Wireless communications devices; prohibition" becomes legal and binding. The Statute will prohibit any person from "Operating a motor vehicle while manually typing or entering multiple letters, numbers, symbols, or other characters into a wireless communications device, or while sending or reading data on such a device for the purpose of non-voice interpersonal communication."

However, the statute does not apply when using a device or system for navigation purposes. Per the new law, texting while driving is considered a secondary offense; meaning that a law enforcement officer cannot initially stop you for using a cellular device while driving – a person must first commit another driving infraction. The first time offense fee for texting while driving is $30, a second offense within a five year period pulls a $60 fine. If you cause a motor accident, the new law gives authorities the ability to subpoena your phone record to use in court, which was previously illegal in the state.

Sen. Anitere Flores of the 37th district of Florida commented on the new Statute

"The issue of banning texting while driving is very important. All too often we hear of motor vehicle accidents caused by distracted drivers who are using cellular devices while driving. Senate Bill 52, Use of Wireless Communications Devices While Driving, is sure to make a difference in keeping our residents safer. I am proud to say that I voted favorably for Senate Bill 52 during the 2013 Legislative Session. With the support of my colleagues in the Florida House and Senate, this bill passed and was signed into law by the Governor," said Sen. Flores.

Around campus, students are taking the new law well.

"It is a step in the right direction, if it is enforced. I can't tell you how many times I've seen someone swerving all over the road with a phone in their hand trying to update facebook or send a text," said Freshman Bobbia Ausmus.

"I'm ecstatic that Florida finally took the initiative to pass the no texting and driving law. In my opinion, it will drastically decrease the amount of accidents on the road and make it a safer place for the vast amount of commuter traffic on a daily basis," said Freshman Lauren Muglio.

"If You Can't Afford An Attorney . . ." Recognize These Words?

By Winnie Jean-Enard
Contributing Writer

To celebrate the Constitution Day and to mark the 50th anniversary of the Gideon V. Wainwright case on Sept. 17, 2013, the University invited a guest speaker, Dean Bruce Jacob, an attorney who represented the state of Florida before the Supreme Court in the Case Gideon v Wainwright, to share his memories of the case.

Gideon v. Wainwright is a landmark case ruled under the fourteenth amendment of U.S. Constitution which later established the right to counsel in criminal cases. "If you can't afford an attorney, one will be provided for you". Almost everyone is familiar with these words.

The parties involved were Clarence Earl Gideon, the plaintiff, and Louie Wainwright, the defendant. Gideon already had a criminal history and was convicted of five years in prison for breaking into the Bay Harbor Pool Room (in Panama City, Florida) with intent to commit burglary. He requested counsel but his request was rejected by the court. Knowing he is entitled to be represented by Counsel, he argued in an appeal to the Supreme Court that his rights were violated. The case reached the U.S. Supreme Court in 1963 and Gideon won.

Bruce Jacob, the sole survivor of the Gideon v. Wainwright case came to the University divulge information about this historical case. Faculty and students made their way to Selby auditorium to experience this part of history. It was a full house; there was not a vacant seat inside. Jacobs captured the audience's attention when he spoke about his early beginning in law. Jacob was merely 26 years old when he was appointed to this case.

The Consitution Day Team

Photo taken by Winnie Jean-Enard

"I started to work on the case in March 1962, I was 26 years old and finished in March 1963", said Jacob.

As he gave his presentation, the audience was openly interacting with him. They were sitting on the edge of their seats eager for every detail. When asked about his feelings on the case, he was bitter about the loss, but he felt justice was served and said, if the choice was given to him, he would represent Gideon before the Supreme Court. Jacob believes Gideon deserved to win.

Not only was Jacob's presentation fascinating, it made the audience appreciate the Justice system and proves that the law is not always black and white. Sophomore Lakiya Shelton was enlightened by the event:

"Bruce Jacob's presentation was interesting. Given his experience as a lawyer, hearing his personal feelings about the ruling of the Gideon vs. Wainwright case was eye-opening. Prior to this event I assumed that the right to counsel was pretty much universal, but hearing how defendants had to represent themselves unless certain criteria were met, makes me appreciate the current judicial system".

Sophomore Shayvonne Renaud thought it was a valuable learning experience, for she didn't know much about the history of the Gideon v. Wainwright case:

"Never before did I know the history of the words: if you can't afford an attorney one will be appointed to you. I'm glad I went to this presentation because I actually learned something from it. "

Junior Amber Evans appreciated the presentation from a different perspective. It taught her that one must know his/her basic rights:

"My favorite part of Bruce Jacob's presentation was the antagonist Gideon. I liked the fact that he knew his rights and had the audacity to fight the system".

Dr. Heather Parker, the department chair of social sciences at the university appreciated that the audience was able to learn something valuable:

"Everyone should understand how our rights were won and that the laws that govern our society are not static but ever-changing. This presentation illustrated how these changes occur".

Dr. David Persky, Department Chair of Criminal Justice at the University was impacted on a more personal note considering his longtime friendship with Jacobs. As a result, Dr. Persky's highlight of the night was witnessing his long time friend open up about the case: "Over the many years I've known him, I've never heard him talking about the Gideon experience. I think it was fascinating. I read the book, but it was just fascinating to hear him, because he was right there".

For Dr. Jack McTague, it was Jacob's humor that caught his attention,

"The funniest moment is when he said: I didn't do a good job because I lost the case. He had a good sense of humor, and that's good. He didn't take himself too seriously. For somebody who has been practicing law for over fifty years, he was able to laugh at himself. I think that was good.

Overall, it was great evening. Ears and minds were opened as Bruce Jacob shared a part of history with Saint Leo University on the 50th Anniversary of the Gideon v. Wainwright case.

Apple Launches the iPhone 5s and 5c

By Jocelyne Hilary
Staff Writer

Examples of the new updates.

Photo taken by Renee Goodwin

Since the successful release of the very first iPhone back in 2007, Apple has continued to show its dominance in the tech market. Having created products that have dominated the sales figures on a global scale, the iPhone is not going anywhere anytime soon. With people becoming ever so dependent of their phones, for many Apple fans . September 20 This year, however, things are quite different; instead of one highly anticipated iPhone, there are two: the iPhone 5s and the 5c.The current addition to the iPhone family, the iPhone 5, released in October of last year, failed to measure up to the expected sale outcome the company owners anticipated. So critics and tech enthusiasts are waiting to see if these two new series can live up to their name. Senior Steven Bullard, who currently owns an iPhone, said, "I am very excited for the new iPhone. I am particularly interested in the 5s. I am excited about the 64-bit native architecture; it is such an immense processing power in your pocket. I was fortunate enough to be able to experiment with iOS7 before its release, and I am very excited to see what developers make of it. The finger print reader is also cool, but I bet it will drain the battery. In addition, the new gold color is awesome. I just can't wait for the 20th." The first question is: what's the difference between the 5s and the 5c? The 5s is the follow up to the iPhone 5 with a similar design; the only difference is that, in addition to the grey and black models, there is now a gold model available. Internally, the enhancement the 5s has include iOS 7, 1080p front facing camera, dual flash , fitness tracker and the highly exciting finger print scanner. The 5c is a new series by Apple; it offers a large variety of bright colors and is cheaper by $100 with a starting price of $99. Despite having many internal similarities to the 5s, the 5c will not have the finger print scanner that many Apple fans are anticipating. With the social media frenzy, continuous commercials and packed stores, is it inevitable that the newest additions to the iPhone family will see the same success? Despite Apple's huge success, the android phones, especially the Samsung Galaxy, have proven to be ever so popular in the consumer market Senior Nancy Conejo said, "Apple is renowned for being a good brand; however, I recently purchased the Samsung Galaxy 3S and I personally am not tempted to buy the new iPhone. I think it is brilliant that the iPhone 5c is available because now a lot more people can have access to an iPhone since they are more affordable. I think it is a cool phone for children and teens, especially since the average at which many get phones have lowered further." It couldn't come soon enough. Now all Apple can do is wait and see whether their new iPhones can live up to their names and produce soaring sales figures.

Double, Double Mobile Internet

By Craig Graves
Contributing Writer

As technology advances, so does its many capabilities and those able to use it. Phones are not just being used for making calls or sending messages. A recent study from the Pew Internet and American Life Project has found that the use of the Internet on mobile devices in the U.S. has doubled since 2009.

According to cnn.com, 31% of people in 2009 reported using their phones for accessing the Internet. Pew began tracking Internet usage on cell phones in 2009 and found that the largest jump in online phone usage was among the 50-64 year old demographic. The study also showed that more people are solely using their phones to access the Web. The demographic that uses their phones the most to access the Internet has consistently been the 18-29 year olds.

"I use my phone all the time," said Sophomore Natalie White. "[I'd] rather use my phone instead of a time-consuming computer."

"[My phone] is more convenient than a computer," agreed Junior Xuxanyc Cummingham. "The Internet can be slow sometimes, but it is still better than a computer."

Not everyone uses their phones to access the Web.

"I can't afford the data plan," said Junior Joey Longo. "I'd just use a computer."

It is not free for everyone to get on the Internet on their phones. This capability can be purchased as a data plan with monthly fees for a set amount of memory.

As smartphones become faster and more people get them, the mobile Web use might increase even more.

"I was alive before cell phones existed," said Freshman Heather Phillips. "Now I can look up almost anything on my phone almost anywhere."

Campus News

New ROTC Opportunities Provided

By Shawnee Arnett
Contributing Writer

This past summer, the ROTC program received a new, updated facility on campus to replace the old, underdeveloped one. The general response from the program has been positive.

The new facility is located on the right side of Saint Edward's Hall and is facing the area that once housed the old Music Building. It has a vibe that suggests it is a tiny campus of its own. The facility consists of two portable buildings complete with a variety of new amenities including: a student lounge, a private computer lab, a recruitment desk, two new bathrooms, an instructor's office, and a private classroom dedicated solely for use by the ROTC program. Because of the development of this centralized location, cadets are able to learn, interact with one another, and develop as active members of the ROTC program without ever having to leave the facility — which provides for ease, comfort, and a stronger sense of community amongst the students and the instructors.

William Patterson, an instructor of the ROTC program, is particularly fond of the deeper sense of camaraderie that has developed amongst the cadets since the opening of the new facility.

"It's like in the military where we have our own, so we don't have to go outside [the facility] and we don't have to depend on others... The cadets have a place where they can come in and lounge around and we have a more hands on experience and more insight with the cadets," said Patterson

John Crawford, a student of the program, explained how the building was obtained..

"This was actually previously used by the construction company that Saint Leo uses. And after they finished the School of Business, the construction company was done with it - so Saint Leo acquired them [the portable buildings]

for us," said Crawford.

The new facility meets the academic needs of the program.

"We have everything we need as an ROTC program now," said Crawford.

The new facility has served to improve the quality of education received by the cadets since its opening in the summer. The change is powerful considering the small number of resources that were in the old ROTC building.

"It's great compared to the old trailer where we had one room that worked as a conference room, office, and anything else that we needed it for," said Crawford.

Along with the fact that there was only one room that had to serve multiple purposes for the ROTC program, there were no bathrooms in the old facility. Cadets and instructors both had to go to other buildings to use the restroom. ROTC courses also had to be taught in either Cannon Memorial Library or The Marion Bowman Activities Center.

"Before [the new building], it caused some inconvenience when we didn't have all of the lesson plans in the room. We had to step away from the classroom to run back up here, which took a lot of time away from the cadets and their training," said Patterson.

Now that the ROTC program has its own classroom, it makes it easier for instructors to watch over activities.

"We can easily go from one building to the next and we can check on them [the cadets]. I think it's more convenient for us," said Patterson.

The change from the old facility to the new one has clearly made it easier for the instructors to give the cadets more freedom while still maintaining the order and the structure that their program is well known for.

The new facility has also provided something of a home base for the cadets on campus. The student lounge has a cozy atmosphere that creates a comfortable environment for cadets to get to know their peers and relax between classes. Beverages are offered to the cadets for a small price, which is quite the convenience when the other option would be to make the trek to The Lion's Lair or find a vending machine in another building.

The cadets are also able to socialize with one another on the new deck that connects the two portable buildings.

"[The deck is] nice for hanging out in between classes," said Crawford.

Another benefit of the new facility is the private computer lab, which is specifically meant for cadet use. The privacy of this area ensures that cadets are able to complete their work without the hassle of waiting for a computer to be available at the library or the Learning Resource Center. Cadets are also offered free printing, which makes the facility all the more convenient when it comes to completing assignments.

The new facility also has a training field right in its backyard, which is an added bonus on those early mornings when cadets have physical training.

"We have physical training Mondays, Wednesdays and Fridays from 6:30 to 7:30 in the morning, so it's very convenient because we have the department right here and we can step right outside and do PT [physical training]," said Crawford.

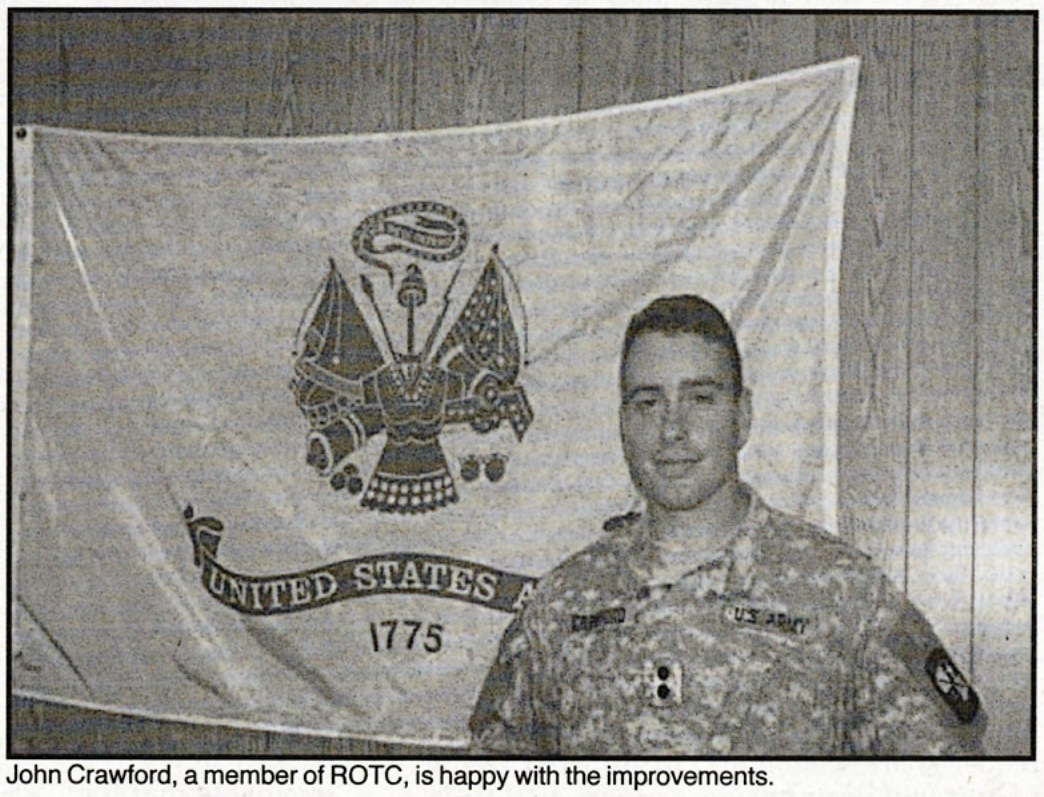
The location is well-kept and contains equipment built into the field for the sole purpose of being used during ROTC's training practices. Both Patterson and Crawford note that though all cadets on campus are required to attend these physical training sessions, other students are welcome to attend as well.

Perhaps the most exciting addition to the new facility is the classroom complete with VTC (Video Teleconferencing Technology), which is necessary for the classes to take place.

Saint Leo's ROTC classes are not traditional lecture courses. The program is part of The Suncoast Battalion, which consists of the ROTC programs in Saint Petersburg College and The University of South Florida as well. All three programs take classes at the same time, and communicate with one another using the VTC technology.

When asked how the VTC technology worked for the program's classes, Patterson stated that "The support is great. We have great support as far as the IT guys. Whenever we have issues, we call them up and they're on the scene to make sure that we're squared away - that we're good to go. So I think, just in general, it's a whole better setup."

The ROTC program offers courses of study in both Air Force and



John Crawford, a member of ROTC, is happy with the improvements.

Army ROTC. As this is an elective course of study, freshmen and sophomores are able to participate in the program with no obligation to join the U.S. Military after graduation. For cadets who wish to enlist in the military after graduation, scholarships and stipends are available to help fund the cost of tuition, books and living expenses.

Though it is natural for some to assume that ROTC only trains its cadets for military service, it is much more than that.

"It's a program where we try to make sure we have better citizens throughout the country and have better leaders. It's pretty much a program where, as the Army, we try to train our future leaders and try to get them to know exactly what to expect once they move on, whether they decide to join the Army or the civilian world, and how to go about it so they can become good leaders or better leaders. So the ROTC program is not just about military, it's also just making sure that people understand that we want good leaders in whatever they choose, and that they can succeed in their goals for what they want to become. So I think that that is what we try to do in ROTC ... ROTC is not just the army. It's also for future leaders," said Patterson.

Thanks to the addition of the new facility, the ROTC program will have the resources necessary to train bright young leaders for years to come.

Eating on the Cheap (But Not Cheating Your Health)

By Wendy Legorete
Distribution Editor

Being a college student for the last two years, I know how difficult it can be to acquire nutritious food without going over a weekly monetary budget of fifteen dollars (I kid you not). When you're getting low on grocery money buying Greek yogurt and fresh strawberries, those high-sodium ramen packets start to look really friendly. However, there are some decent foods in the grocery section of your local retail store that are chock-full of body-beneficial nourishment, but somehow they seem to go unnoticed when sitting next to a brand-name pastry. So, here are some tips on how to shop for nutrition without sacrificing whatever amount of money you have in that homemade duct tape wallet:

1. Go to the Dollar Store First.

Depending on which dollar store you go to, there's a grocery section at the back, and usually they're selling the same stuff (brand and everything) for a much cheaper price. However, you might want to go to the store's website first and compare products with that of the retail store just in case. Now the dollar store doesn't sell garden-fresh produce, but it does have the frozen stuff, which leads me to my next tip:

2. Buy Frozen Fruits and Vegetables instead of Fresh.

Don't turn your nose up at it just because of the "thawing-out" process you'll have to go through to get to your fruits and vegetables; there's nothing wrong with purchasing frozen produce products. Frozen fruits and vegetables are usually cheaper than the "fresh" off-the-truck produce, but it also depends on if the produce is in-season at the time (we'll get into that later).Typically, the only preservative in the merchandise is the frost-covered produce that is the result of the flash-freezing method that the manufacturer uses to maintain the food. So, artery-hardening amounts of sodium in other frozen entrees such as TV dinners and cuisines claiming to be "lean," are not an issue with frozen produce. And you know that myth about frozen fruits and vegetables being undersupplied in vitamins? It isn't true. Don't believe me? Look up the vitamin content of a fresh stalk of broccoli while comparing it with its frozen counterpart and see for yourself.

3. Buy Generic or Store-Brand.

True, there are some products from generic or store-brand companies that add copious amounts of preservatives or processed sugar to what they're manufacturing when compared to their name-brand equivalents, but that shouldn't deter you from considering the former. Generic and store-brand foods are definitely cheaper, and if you make sure to read the ingredients on the back you will know which products you need to stay away from and which ones you should purchase instead of the name-brand.

4. Foods that are Generally Cheap.

This section is self-explanatory. Here's a list of foods that are nutritious and inexpensive:

Oatmeal: Know it, love it, eat it, but don't get the individual packets because it costs more. The generic brand frequently sells the unflavored whole-grain oatmeal in those big tubes for little more than a dollar (I'm still working on mine from two months ago).

Eggs: Pretty decent price-wise and full of protein, but don't overdo it. One egg is equal to half the allotted daily amount of cholesterol.

Brown rice: More filling than white, though you might need to get some chicken stock or some kind of broth to improve the flavor.

Black beans: One of my personal favorites: they're cheap, they're packed with protein, and they're dark-colored (typically an indication of being full of antioxidants). Make burgers with them or heat them up as is.

Sweet potatoes: These things are so versatile in a recipe it's unreal. Bake them, make fries with them, make chips out of them, make a casserole out of them, or go traditional and just mash them up. They're also a great source of vitamin A.

In-season fruits and vegetables: Again, self-explanatory. Here's a list of fruits and vegetables that will be in-season as of fall:

Apples
Bananas
Beets
Broccoli
Brussels Sprouts
Carrots
Cauliflower
Cranberries
Garlic
Ginger
Grapes
Mushrooms
Parsnips
Pears
Pineapple
Pumpkins
Rutabagas (If you know what these are, give yourself a gold star)
Sweet Potatoes and Yams
Swiss Chard
Winter Squash

So take the advice of this article to heart (and to the grocery store): you don't have to cheat eat to eat cheap.

Apple Dump Cake Recipe

By Tom Buckley
Contributing Writer

Trying to find a good dessert recipe that doesn't require tons of ingredients that you will never use again is very difficult. Most of us are low budget college students and don't have the money to stock our apartment kitchens with every known ingredient to man, because we do not want to waste what we don't use. I was looking around one day on the internet and found a simple but delicious recipe for apple dump cake that I had to try out for myself. It was delicious.

There are only three ingredients:

About 5-7 peeled, cored, and thinly sliced granny smith apples (any red apple will do)
> 1 Box of yellow cake mix
1 Stick of Butter
Optional: 1 tblsp Cinnamon Sugar to coat apples and to sprinkle on top of the cake (combination of sugar and cinnamon)

Directions:

1. Preheat the oven to 350 degrees Farenheight.

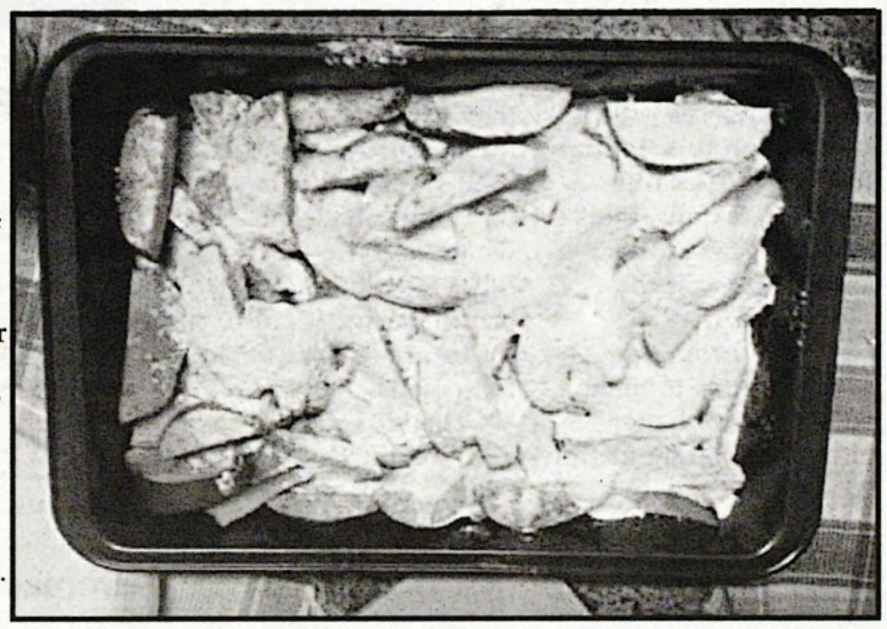
2. Peel, core, thinly slice the apples, and place in baking pan.

3. Sprinkle the dry cake mix on top of the apples.

4. Melt the stick of butter and pour evenly over cake mix, pour water if melted butter doesn't cover the entire cake.

5. Bake for 30 - 45 minutes or until topping is golden brown.

6. Let cool and serve warm with ice cream if wanted.



Cake mix covering the sliced apples.

Spinoff of the Walking Dead Announced

By Kortney Rohrback
Contributing Writer

AMC announced that there will be a spinoff of The Walking Dead released in 2015. The spinoff, Spread the Dead, is said to replace The Walking Dead. This spinoff will be in the same dramatic, zombie-infested, post-apocalyptic world that the original show takes place in.

The Walking Dead will return with its fourth season on October 13th, around Halloween as always. Even though the show has plenty room for continuation, it will be coming to an end sometime before the spinoff is released. Although, the exact dates are not definite yet, the rumored ending of the original show and start of the spinoff upsets some of the show's fans here at Saint Leo.

"I really liked The Walking Dead. I am very sad to hear it is ending and I don't think the spinoff will be as good," said Freshman Jayne Nazario. "I just don't think it will be the same."

"The Walking Dead has a good storyline. I don't see why they would replace it with this new spinoff show. I guess, it might be a good show but it won't be as good as The Walking Dead,", said Junior James Beston.

Spread the Dead is still in its developing stages. AMC wants to create and explore a new corner of the zombie apocalypse. The spinoff won't be tethered to Robert Kirkman's comic books like the original show is. It is supposed to have a new cast and storyline.

"The opportunity... has set my creativity racing," Robert Kirkman said in a press release.

Not everyone is upset about the original show coming to an end.

"I personally can't wait for the spinoff to come out. It's probably going to be better since AMC has the ability to do absolutely anything. I think that it will have a very creative edge to it," said Freshman Miranda Brozik.

"I think it will be really cool. I can't wait to watch," said Sophomore Jeff Cottrell.

Will you be watching when Spread the Dead premieres or will you be watching The Walking Dead reruns? Let us know on the Lion's Pride Facebook!

The Fairy Tales Are Back!

By Kelanie Cuadrado
Contributing Writer

Think you are too old for fairy tales? Guess again! Once Upon a Time, ABC network's fairy tale drama series, is gearing up to return to television on September 29 at 8pm.

The show, which originally premiered on October 23, 2011, takes place in the fictional seaside town of Storybrooke, Maine, where all of the residents are actually characters from various fairy tales that were transported to the "real world" and robbed of their memories. One day a boy named Henry Mills (Jared S. Gilmore) shows up at the doorstep of Emma Swan (Jennifer Morrison) with a book of fairy tales claiming that she is his mother. He tells her only she can break the curse of Storybrooke and help the characters get back to the fairy tale world. Henry, the grandchild of Prince Charming and Snow White, is just a normal boy since he was born in the real world. However, rumor is he may have some sort of magical power. Emma tries to break the curse with the help of her son Henry but Regina, the wicked witch, seems to have other plans.

The show does a wonderful job of showing that all fairy tales don't end with happily ever after. We have the "good guys" such as Snow White and Prince Charming (played by Ginnifer Goodwin and Josh Dallas), along with their daughter Emma Swan and their grandchild Henry Mills. You can't have a story without the villains. The main antagonists of the show are Rumplestiltskin (Robert Carlyle) and the Evil Queen (Lana Parrilla).

Once Upon a Time is a show that anyone could watch and enjoy. By looking at the previews I thought I knew what the show was going to be about and what to expect. I was wrong. There was so much more to the storyline. The number one thing that makes me excited about this show is as a little girl I loved hearing the stories and I don't have to stop. The show is darker and exciting because it provides more details about the things we don't know. We also get to see all the characters from different stories interact with each other.

Even though the special effects are not the same quality as Lord of the Rings or Matrix, the show isn't in horrible quality and everything looks good. You know what is real and what's fake but they did a great job making it seem like the audience is in the fairy tale world with the characters. The costumes and the makeup of the characters are fascinating. They also did a great job with keeping the environment settings the same just changed it a little by adding more detail.

Once Upon a Time never runs out of excitement. Once Upon a Time is the complete opposite of a boring dull show that never gets to the point. Unlike some other shows, there is always something going on, but it still makes sense and seems like a story. Each episode tells the story of different characters. There is very little chance of you becoming bored.

If you are already a fan of this show, you know it's time to start getting ready for the premiere September 29. If you haven't watched it all, now is the time to catch up! Peter Pan, Tinkerbell, Prince Eric and Ariel from the Little Mermaid will be the new characters joining this exciting show. This season will be about Peter Pan and his home. But Neverland is a much darker place than you remember. What does Peter Pan want with Henry? Can our heroes put aside their differences and work together with the villains in order to save Henry?

A new spinoff called "Once Upon A Time in Wonderland" is set to premiere on Thursday, October 10. This Alice in wonderland will be much different from what we are used to. They will still keep the main characters but the storyline will be different and will be darker. Alice also has some fighting skills. We are in for some surprises from both series!

Sports

Women's Vollyball Serves Another Win

By Michael Walker
Contributing Writer

This past weekend, the women's volleyball team hosted the Saint Leo Classic. It is a tournament that has been around for years. Some people do not realize that volleyball is one of the most strategic sports out there. It is more than just hitting a ball over a net. These girls can sense where the ball is going before it is even played, diving and smacking before the other team realizes what is happening. The women showed this past weekend that their diligence is paying off.

On the first day of this two-day tournament, the women lost their first game against South Dakota Mines. They played a five set match. The scores were close throughout the match, but they lost 3-2. After centering their anger from the close loss, they came back fierce and strong, unwilling to lose again.

Against Molloy, the women conquered their opponents with a three set match victory of 3-0. The women absolutely dominated Molloy with constant kills made possible by their excellent communication. It is uncertain as to what they actually yell on the court but whatever it is it clearly works for them.

On day two, the women kept up their Lioness fight. They had a four match set against Columbus State. Each round was an easy win for the Lions aside from the second, where the women just lost the match by three points.

The last game of the tournament was against Cedarville. The Lions won 3-0. This increased their overall stats to 9 wins 3 losses, giving them a great start to their season.

Some standouts of the tournament were Yaidimar Santiago, leading in digs, Jaclyn Mailoto, leading in assists, and Lauren Campbell, leading in kills. Volleyball is not an easy sport. These women obviously know that. For them, it's about the love of the sport. It's about the teamwork. It is about the time invested. Most importantly, it is about the communication and bond they have created to become more than a team. They are a family.

With such a great start to the season, the volleyball team is out to show they are a not a team to mess with. They are here to prove they will win.
